CHAPTER 01

Understanding PCOS

PCOS is India's most common hormonal disorder — affecting 1 in 5 women of reproductive age.

Insulin Resistance

Up to 70% of women with PCOS have insulin resistance — causing the pancreas to overproduce insulin, which drives androgen excess.

Androgen Excess

Elevated testosterone and LH/FSH ratio disrupt ovulation, cause irregular cycles, acne, and unwanted hair growth.

Gut Microbiome Link

Women with PCOS show significantly reduced gut microbiome diversity — directly amplifying systemic inflammation and insulin resistance.

Chronic Inflammation

Low-grade inflammation is both a cause and consequence of PCOS — worsening insulin signalling and androgen production in a self-reinforcing cycle.

CHAPTER 02

Diet Impact on *Insulin* Sensitivity

A **low-glycaemic diet improves insulin sensitivity by up to 45%** in women with PCOS — reducing androgen production and restoring more regular cycles in 3–6 months.

KEY TAKEAWAY

Every meal matters: pairing carbohydrates with protein, fat, or fibre at every single meal blunts the insulin spike and is the single most impactful PCOS dietary change.

CHAPTER 03

Anti-Inflammatory vs Pro-Inflammatory

Food choices directly regulate the insulin-androgen axis at the root of PCOS.

INCLUDE

Anti-Inflammatory

These foods lower insulin, reduce androgens, and support ovulation regularity.

Ragi Rajma Moong dal Flaxseed
Walnuts Methi Palak Curd Berries
Brown rice Oats

LIMIT

Pro-Inflammatory

These drive insulin spikes and amplify the hormonal disruption at the core of PCOS.

White rice (large portions) Maida Sugar
Aerated drinks Deep-fried foods
Packaged snacks Sweetened dairy

Inositol (found in citrus fruit and chickpeas) directly improves insulin signalling in PCOS — one of the most evidence-backed food compounds for this condition.

CHAPTER 04

The PCOS Plate Formula

THE GUTGURU HORMONAL BALANCE METHOD

**Lean Protein**

Moong dal, paneer, eggs, soy, chana

+

**Low-GI Carbs**

Ragi, oats, rajma, brown rice, dalia

+

**Anti-inflam Fat**

Flaxseed, walnuts, cold-pressed oil

+

**Probiotic**

Curd, kanji, buttermilk

EXAMPLE MEAL

Ragi roti + rajma curry + flaxseed curd raita**0.8–1.0g protein per kg/day + low GI at every meal**

DAILY PCOS NUTRITION TARGET

CHAPTER 05

Common **PCOS** Mistakes

**Following a completely fat-free diet**

Healthy fats (ghee, flaxseed, walnuts) are essential for hormone synthesis. Fat-free diets worsen hormonal imbalance.

**Eating large portions of white rice and maida every meal**

These cause rapid insulin spikes — the primary driver of androgen overproduction in PCOS.

**Skipping breakfast**

Skipping the first meal worsens insulin resistance throughout the entire day, compounding the core metabolic issue in PCOS.

**Assuming PCOS means zero carbs ever**

Low-GI — not zero carb — is the target. Rajma, ragi, oats, and dalia are excellent carb choices for PCOS.

**Relying on medication alone without dietary changes**

Metformin manages symptoms; diet addresses the root cause. Both work better together than either alone.

CHAPTER 06

Quick Myth Busters

MYTH You must go completely low-carb to manage PCOS.

TRUTH **Low-glycaemic index — not zero carb — is the clinical recommendation.** Dal, rajma, ragi, and oats are excellent PCOS-friendly carbohydrates.

MYTH You can't get pregnant with PCOS.

TRUTH **With dietary and lifestyle management, the majority of women with PCOS conceive.** PCOS is a manageable condition, not a fertility sentence.

MYTH Losing weight is the only way to fix PCOS.

TRUTH **Dietary quality matters independently of weight.** Insulin sensitivity and androgen levels improve with an anti-inflammatory diet regardless of the scale.

TAKE THIS HOME

Your 3 Quick Wins

Three specific actions you can start this week — no equipment, no cost, measurable results.

1

Add Protein to Every Single Meal

From tomorrow, ensure **one protein source appears at every meal** — dal, paneer, eggs, chana, or soy. Don't eat any meal that is purely carbohydrate. This single habit begins lowering your insulin response within days.

START TOMORROW

2

Swap White Rice for Ragi or Brown Rice

Replace your white rice portions with **ragi or brown rice** for 21 days and observe changes in energy, hunger, and skin. Lower-GI carbohydrates directly reduce the insulin spikes driving androgen production in PCOS.

FOR 21 DAYS

3

Walk 20 Minutes After Your Largest Meal

A **20-minute walk within 30 minutes of your largest meal** improves insulin sensitivity measurably within 2 weeks. This is the most clinically validated free intervention for PCOS — more impactful than most supplements.

DAILY, EVERY DAY
