

CASE STUDY

₹1.5 crore closed in 60 days.

THE CAMPAIGN

An AI-led outbound system reached **8,000 cold buyers** across 1,000 companies, without treating the first message as the whole strategy.

The situation

Most businesses stop outreach after four messages. That feels disciplined, but it means stopping before the majority of replies and closes have had a chance to happen.

The campaign treated outbound as an operating system: research, sequencing, follow-up, channel choice and response handling working together. The human team stayed focused on the conversations that mattered.

What they did

- 1

Built a buyer list of **8,000 cold decision-makers** across 1,000 companies, with AI finding the right people and writing relevant first messages.
- 2

Ran the sequence long enough to reach the follow-ups where the response curve changed: message six and follow-up eight.
- 3

Used WhatsApp where it created the stronger response: **8.2% positive replies** versus 0.8% from cold email.
- 4

Handled replies inside a **5-minute response window**, while the conversation was still warm.

The result, 60 days

₹1.5 crore closed

From a system that kept moving after the first message.

64,000

total touchpoints

1,920

conversations created

~240

real leads

8.2%

positive WhatsApp replies
vs 0.8% email

	BEFORE	AFTER
Follow-up	stops at 4	reaches 8
Channel	email 0.8%	WhatsApp 8.2%
Response	hours later	within 5 min
Output	64K touches	₹1.5Cr closed
