

CASE STUDY • ILLUSTRATIVE EXAMPLE

A ₹2Cr business found ₹1 lakh a month hiding in work nobody needed to do by hand.

THE BUSINESS

A ₹2Cr services-plus-D2C company with a 4-person team. The founder personally handled follow-ups, listings, posting and outreach.

The situation

Nothing was broken. Everything was manual. Follow-ups, content, product listings, LinkedIn, email and dead-lead chasing all ran on someone's hands, usually the founder's.

Add it up and it was **120+ hours a month** of repeat work. At even ₹800 an hour of founder time, that is roughly ₹1,00,000 a month spent doing what a ₹15,000 system does without missing a day.

What they did

- 1

Mapped all **8 automatable systems** against the business: content, listings, WhatsApp, LinkedIn, outreach, email, image and carousels.
- 2

Ranked them by revenue impact, not by what was easiest, and picked the top 3 to wire first.
- 3

Built those 3 over one quarter, each with a human approval step. Nothing ran fully blind.
- 4

Handed the founder a dashboard and a 20-minute weekly review instead of 120 hours of doing.

The result, one quarter

₹1,00,000 / month of founder time reclaimed

Repeat work moved to systems running at about ₹15,000 a month.

120+ hrs

monthly repeat work off the founder's plate

8 systems

mapped, the top 3 live in quarter one

₹15K/mo

system run cost vs ~₹1L of manual time

near-daily

output, up from sporadic bursts

	BEFORE	AFTER
Founder hrs / mo	120+	~20
Monthly cost	~₹1L time	~₹15K tools
Output	sporadic	near-daily
Leads dropped	many	tracked

Not sure which system to wire first?
