

CASE STUDY • ILLUSTRATIVE EXAMPLE

2,000 dead leads,
already paid for. A 3-
week sequence turned
them into ₹5,00,000, at
zero acquisition cost.

THE BUSINESS

A business that had run ads for two years. Its CRM held **2,000 leads** marked no-response, follow-up-later and not-interested-right-now.

The situation

Every one of those leads was paid for once and then forgotten. No human team systematically re-asks 2,000 people.

The acquisition cost to revive them was exactly zero. They were just sitting there, cold.

What they did

- 1

Built a **5-message WhatsApp and email sequence** over 3 weeks, genuinely useful, not just checking in.
- 2

A price update, a new offer, a case study, a real question about whether the problem ever got solved.
- 3

Every message stopped the moment someone replied or asked to stop.
- 4

Model assumption: just **3%** restart a conversation.

The result, 3 weeks

₹5,00,000 recovered,
₹0 new ad spend

From leads that were already written off, simply by re-asking them well.

2,000

dormant leads
systematically re-asked

60

live conversations, at a 3%
restart rate

₹50,000

average order value on the
wins

₹0

acquisition cost, leads
already bought

	BEFORE	AFTER
Dead leads worked	never	all
New ad spend	needed	₹0
Conversations	0	60
Revenue	₹0	₹5L

Have 500+ cold leads in a
sheet?
