

CASE STUDY

One product photo became 30 launch-ready assets, in 20 minutes instead of 3 days.

THE BRAND

A D2C brand launching **2 to 3 new SKUs a month**. Each launch went live with a PDP and one ad, because that was all there was time for.

The situation

A full launch (PDP, 5 ad variants, social posts, carousel, email, WhatsApp, marketplace variants, alt text) was 3 days across a writer, a designer and the marketplace person.

Outsourced, it worked out to roughly ₹6,000 per asset once the retainer was divided by what actually shipped. So launches shipped thin.

What they did

- 1

Fed the engine one product photo and the SKU data.
- 2

It produced the full asset tree: PDP, 5 Meta variants, 3 social posts, an 8-slide carousel, an email block, a WhatsApp blurb, marketplace variants, lifestyle images, alt text and keywords.
- 3

The team reviewed for about **20 minutes** and approved.
- 4

Every launch now ships complete, present everywhere a buyer looks.

The result, per launch

₹1,74,000 saved per launch vs an agency

30 assets at ~₹200 of API cost each instead of ~₹6,000 of agency cost.

30

assets from one product photo

20 min

of review vs 3 days of production

₹200

API cost per asset vs ₹6,000 agency

complete

every launch, not just a PDP and one ad

	BEFORE	AFTER
Assets / launch	1-2	30
Time	3 days	20 min
Cost / asset	₹6,000	₹200
Launch reach	thin	everywhere

Launching with one ad and a prayer?
