

CASE STUDY

Same ads, same leads. Replying in 5 minutes instead of next morning doubled the conversations.

THE BUSINESS

A business spending ₹1L a month on lead ads for 200 leads. The team replied the next working morning.

The situation

Leads filled the form at peak intent, around 2:40 PM. The reply landed 18 hours later. By 3:15 PM the same day, a competitor's WhatsApp had already arrived.

Nothing was wrong with the ads. The most expensive leak was the gap between the click and the first reply.

What they did

- 1

Wired a WhatsApp speed-to-lead system: form submit triggered a message **within 5 minutes**, from the business number, in the brand tone.
- 2

Each message asked one qualifying question: budget, location or use case.
- 3

Answers routed to a human with full context, flagged hot or nurture.
- 4

No answer in 24 hours triggered a polite automated follow-up, including Sundays.

The result, 90 days

2× the conversations
from the same
₹1,00,000 ad spend

Replying while the buyer was still on their phone, every time, including Sunday 11 PM.

5 min

first reply, down from next morning

200

leads a month, now answered every time

24/7

coverage, including weekends

₹0

extra ad spend for the lift

	BEFORE	AFTER
First reply	18 hrs	5 min
Coverage	weekday AM	24/7
Leads answered	some	all
