

CASE STUDY

The founder with "no time to post" shipped 40 assets a month, on 20 minutes a week.

THE FOUNDER

Runs a **6-person B2B SaaS company in Pune**.
Closes business on nearly every sales call.
Knows content works. Her last LinkedIn post before this was **5 months old**.

The situation

She did not have a content problem. She had a repetition problem. She could explain her product brilliantly ten times a week on calls, but turning one idea into a blog, three posts, a carousel and an email felt like a second job.

A content agency quoted her **₹75,000 a month for 8 posts** that never sounded like her. She passed. Then she tried to do it herself, posted for nine days, and stopped.

What they did

- 1 Once a week she recorded one 5-minute voice note. No script, just a client story, an opinion, a mistake she kept seeing.
- 2 The engine drafted **10 assets in her voice**: 1 blog post, 3 LinkedIn posts, 1 carousel, 1 email, 1 WhatsApp broadcast, 3 short posts.
- 3 She reviewed for **20 minutes** and hit approve. Nothing published without her click.
- 4 Four notes a month became **40 scheduled assets**, going out on autopilot across the week.

The result, 90 days

₹70,000 / month saved

The agency she did not have to hire. Tooling ran about ₹5,000 a month instead.

40

assets published per month, up from near zero

~3 hrs

total founder time across the full 90 days

14

inbound conversations from posts that used to never exist

₹3,00,000

new pipeline traced to that inbound, in one quarter

	BEFORE	AFTER
Posts / month	0 to 2	40
Founder time	a second job	1 hr / mo
Monthly cost	₹75K agency	~₹5K tools
Sounds like her	rarely	always

Talk well but post never?

Reply "ENGINE" and I will show you what your first voice note would produce. Free, no call needed.
