

CASE STUDY

A founder's sent folder already held a month of content. A mining system dug out 30 pieces a month from work already done.

THE FOUNDER

A founder who explained their expertise brilliantly in **client emails, sales calls and proposals**, then sent each to one person and let it die.

The situation

The best content this business could ever publish already existed, buried and used once. Specific, experienced, in the founder's voice, answering questions real buyers asked.

Multiply one great client email by every call, proposal and objection handled this year. Hundreds of pieces of proof, written once, never reused.

What they did

- 1

Piped call recordings, sent emails, proposals and WhatsApp threads into one place, client names and numbers stripped automatically.
- 2

The engine extracted the reusable gold: objections answered, mistakes explained, frameworks used without realising.
- 3

Each nugget became a post, email or carousel, anonymised and in the founder's voice.
- 4

Drafts landed in a review folder, approved in minutes.

The result, per month

₹60,000 / month of content, already paid for in work done

Agency-volume output mined from material the founder was producing anyway.

30 pieces

publishable, mined per month

1 hr / wk

of raw material already being produced

₹0

new content cost on top

uncopyable

content, it comes from real client calls

	BEFORE	AFTER
Content source	none	sent folder
Pieces / mo	~0	30
Extra effort	high	~0
Copyable by rivals	yes	no

Curious what's in your sent folder?
