

CASE STUDY

A D2C brand cut creative cost from ₹2,650 an asset to ₹13, without lying about the product.

THE BRAND

A D2C brand spending ₹1L+ a quarter on photoshoots: studio, photographer, editing, 2-week lead times, one chance to get the brief right.

The situation

A ₹40,000 shoot produced about 15 usable images, roughly ₹2,650 per asset. Every seasonal variant meant another shoot.

The honest catch: AI imagery genuinely replaces about 80% of creative volume (lifestyle, backgrounds, seasonal, banners, social), but the shoot still wins on true product detail.

What they did

- 1

Shot the product once, properly, for the hero detail images buyers actually receive.
- 2

Pointed image generation, driven by the brand kit, at the other 200 creatives a quarter.
- 3

Lifestyle scenes, campaign backgrounds, festival versions and A/B backgrounds, all same-day, unlimited variants.
- 4

Kept generated images away from product-detail claims, protecting returns and marketplace listings.

The result, per quarter

₹2,650 → ₹13 per asset on 80% of creative volume

Same-day variants instead of 2-week shoots, with the product still shot honestly.

₹13

per asset at volume vs ₹2,650

same day

turnaround vs a 2-week shoot

80%

of creative volume automated

20%

still shot, on purpose, for detail

	BEFORE	AFTER
Cost / asset	₹2,650	₹13
Turnaround	2 wks	same day
Variants	1	unlimited
Product honesty	kept	kept
