

CASE STUDY

12 carousels in one 4-hour afternoon, instead of 12 sessions that never actually happened.

THE FOUNDER

A founder making one carousel a week, which meant re-entering content mode **52 times a year** and, in practice, never shipping a full quarter.

The situation

Context-switching is the real cost. One-at-a-time means reopening the template, re-finding your voice and re-deciding what good looks like, every single week.

The ad-hoc route, 12 separate sessions at 2 to 3 hours each, costs 24 to 36 hours across a quarter and rarely ships all 12.

What they did

- 1

Picked 12 ideas in 30 minutes from the blog, voice notes and mined sales calls. Selecting, not inventing.
- 2

Outlined all 12 arcs first, hook to CTA, before designing anything. One hour.
- 3

Batch-rendered all 12 through the locked template.
- 4

Reviewed in one sitting, about 10 minutes each, then scheduled the whole quarter.

The result, per quarter

A full quarter of carousels in ~4 focused hours

20 to 30 hours saved versus the ad-hoc route, and a quarter that actually ships.

12

carousels in one sitting

~4 hrs

total vs 24 to 36 hours

6-8×

output per hour of input

1 quarter

scheduled in one go

	BEFORE	AFTER
Shipped / quarter	rarely 12	12
Time	24-36 hrs	~4 hrs
Context switches	12	1
Quarter queued	no	yes
