

CASE STUDY

Switching from one-shot emails to a 5-touch sequence turned 10 replies into 28, from the same 1,000 contacts.

THE BUSINESS

A business sending one email, hearing silence, and concluding email does not work, **quitting where 65% of the return still waited.**

The situation

Of all replies a campaign earns, about 35% come from email one and 65% from touches two through five. Most businesses leave the larger share unclaimed.

The first email was not rejected, it was buried. The prospect was in a meeting, on site, mid-crisis.

What they did

- 1

Touch 1, the value open: their problem, one insight, no pitch.
- 2

Touch 2 (day 4), a short nudge with one new proof point. Touch 3 (day 9), same offer, a different door.
- 3

Touch 4 (day 15), the objection killer. Touch 5 (day 21), the polite breakup that triggers the only deadline.
- 4

Every touch stopped instantly on any reply, nothing sent late or twice.

The result, same list

10 replies → 28, same list, same spend

2.8× the conversations, just by claiming the 65% of replies that arrive after email one.

2.8×

the conversations from the same list

65%

of replies come from touches 2 to 5

1,000

contacts, unchanged

₹0

extra spend

	BEFORE	AFTER
Touches	1	5
Replies / 1,000	~10	~28
Return captured	35%	100%
Spend	same	same
